DETAILED ACTION

- I. Claims 1-5 are pending.

Election/Restrictions

- II. Restriction to one of the following inventions is required under 35 U.S.C. 121 and 372:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1:

1. Claims 1-2, drawn to a method for producing a 34 kDa truncated plasmin proteolytic protein and a 34 kDa truncated plasmin proteolytic protein.
2. Claims 3-5, drawn to a method for modulating the expression of membrane type 1 matrix metalloproteinase by administering an effective amount of an plasminogen activator inhibitor type 1 isoform lacking a reactive center loop and containing a complete heparin-binding domain or lacking a portion of a heparin-binding domain.

The inventions listed as Groups 1-2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Mulligan-Kehoe et al (J Biol Chem 276(11): 8588-8596, March 16, 2001, PTO 892) teach a method for producing a 34 kDa truncated plasmin proteolytic protein comprising combining plasminogen and rPAI-I23 to produce a truncated plasmin proteolytic protein that is 34 kDa (see page 8590, col. 1, Figure 5, in particular).

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art they do not have single general inventive concept and lack unity of invention.

- III. Accordingly, Groups 1-2 are not so linked as to form a single general inventive concept and restriction is proper.
- IV. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
